

ALoMCP Compliance

SolarEdge Inverter Compliance with the Accelerated Loss of Mains Change Programme (ALoMCP)

SolarEdge Technologies UK confirms, that all inverters manufactured after February 2018 comply with ALoMCP. Inverters installed prior to February 2018, need the CPU version updated with the following firmware* to ensure compliance with the new setting requirements for the interface protection in accordance with [EREC G59](#).

Note: this Programme does not apply to domestic and similar generation that has been connected under with EREC G83. It only applies to generation connected before 01 February 2018 in accordance with EREC G59.

**This may require a communication and digital board change with CPU2 version inverters.*

- For ALoMCP compliance, inverters must utilise DSP1 version 1.0.433 and above for 1Ph HD Wave Inverters.
- For 1 Ph inverter (**non** HD wave) DSP1 version is 1 210 1318 and above.
- DSP1 Version 1.13.1126 and above for 3Ph Inverter for LCD screen Inverters.
- SetApp Inverters automatically comply, as these were manufactured after February 2018.
