Note that testing can be done by the Manufacturer of an individual component or by an external test house.

Where parts of the testing are carried out by persons or organizations other than the Manufacturer then that person or organization shall keep copies of all test records and results supplied to them to verify that the testing has been carried out by people with sufficient technical competency to carry out the tests.

| Initial<br>symmetrical<br>short-circuit<br>current*      | lk  | N/A | 250ms        | 9.48V  | 0.111A       |
| Decaying (aperiodic) component of short circuit current* | iDC | N/A | 500ms        | 5.35V  | 0.084A       |
| Reactance/Re<br>sistance Ratio<br>of source*             | X/R | N/A | Time to trip | 0.004s | (in seconds) |

For rotating machines and linear piston machines the test should produce a 0s-2s plot of the short circuit current as seen at the Generating Unit terminals.

<sup>\*</sup> Values for these parameters should be provided where the short circuit duration is sufficiently long to enable interpolation of the plot

| 13. Self-Monitoring solid state switching  | Yes/or NA |
|--|-----------|
| It has been verified that in the event of the solid-state switching device failing to disconnect the <b>Generating Unit</b> , the voltage on the output side of the switching device is reduced to a value below 50 Volts within 0.5 seconds | N/A       |

| 14. Wiring functional tests: If required by para 15.2.1                     | Yes/or NA |
|---|-----------|
| Confirm that the relevant test schedule is attached (tests to be undertaken |           |
| at time of commissioning).  | N/A       |

| 15. Logic interface (input port)  | Yes/or NA |  |
|---|-----------|--|
| Confirm that an input port is provided and can be used to shut down the | Voc       |  |
| module.   | Yes       |  |
